TECHNICIAN WORK COMPLETED:

-Customer said his bale ejector was not working. Went thru the process to activate the ejector and the ejector was running back and forth like it should be, however the hay was so fine it couldn't grip the bale. Cut the strings and cleaned the bale out of the chamber. Clean the corners of the bale chamber out because they were packed with wet hay. Ran the ejector back and forth and all the fingers were free and everything seemed to work like it should.

-Customer was having problems with knotter number 5 he said it would never make a knot. Inspected the knotter and found that the bill hook and the wiper arm were wore in such a way that they weren't making a good knot. Replaced the wiper arm, bill hook, bill hook gear, bill hook cam, and the cam spring. Set the components according to the service manual. Tripped the baler three times and it made good knots all three times.

-Customer was having problems with knotter number six he said it was making knots but they wouldn't hold. Tripped the knotter and noticed the first knot was good but the second knot was very raggy. Adjusted the twine disc a little bit and tripped it again and the second knot was better but not perfect. Replaced the wiper arm, bill hook, bill hook gear, bill hook cam, and the cam spring. Set the components according to the service manual. Tripped the knotter three times and it made good knots all three times

-While testing the other knotter I noticed that the twine had come out

TECHNICIAN WORK COMPLETED:

- PM360 inspection
- Updated baler software
- Greased the baler
- Installed a camera on the rear of the baler
- Filled baler with twine that the customer had brought in
- Installed twine tubes in the upper twine rollers from maize corp. Lower twine rollers already had the tubes.
- Timed baler and removed and replaced the timing chain. While chain was off installed a new bushing and seals in the stuffer gear.
- Checked the wheel bearings and made sure they had greased in them and that they were tight
- Got tubes from friedrichs and installed them in the pickup tires
- Put new bearings in the pickup tires and packed them with grease
- The sight gauge for the hydraulic reservoir was bypassed with a wire. Unplugged wire and the baler then thru an error. Installed a new sight gauge and the error went away in the monitor.
- Replaced the jumper wires to the plunger load arms because they had bare spots rubbed thru them
- Changed the oil in the main gearbox
- Topped off and ran the knotter oiler
- Replaced a hose that was leaking on the blower fan
- Replaced a stationary hay dog on the plunger floor that was missing
- Cut the bad poly out of the bale chamber floor

		-Replaced the components that put the end gate up and down because they were missing -Freed up the bale ejector so it worked and the end gate would go up and down -Replaced any missing pickup teeth -Replaced one missing pickup cam roller -Replaced the left hand stuffer clutch arm and the stuffer track -Replaced the bushing in the top of the left hand stuffer track -Removed pickup and the packer crank assembly and put all new bearings in the packer crank and set them to the spec in the service manual. Torqued all the bolts in the packer crank assembly. While the pick up and packer assembly were off completely disassembled the stuffer chute and installed a new chute liner. Reassembled the stuffer chute. Cut off and welded a new piece of angle iron on the packer pan and refit the packer assembly. Before refitting the pickup installed a new pickup throat pan. Refit pickup. -Replaced the pickup over running clutch assembly -Replaced the right hand auxiliary drive chain -Tightened and oil all other chains -Checked over the knotters and noticed knotter #6 was not pulling the knot tight and the tail was short. Replaced the billhook cam and tension spring and adjusted the wiper arm clearance. -Replaced on knotter lube fitting that was broken -Ran the knotters thru a cycle with the shop dog and found that one twine finger was stuck and holding back the twine fingers. Once i got the twine finger assembly freed up it tied like it should -Hooked the baler to cutomers tractor and set the hitch and pto
